Animation 制作多段动画

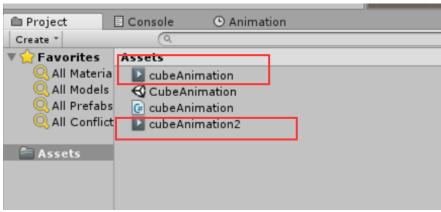

1、创建1个Cube对象制作动画

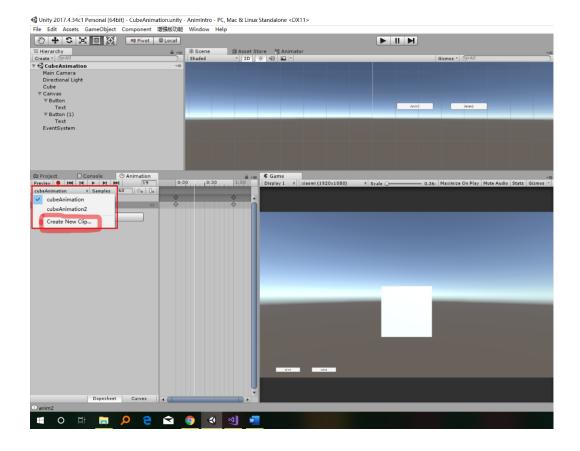

2、选中 Cube, 为其添加 1 个 Animation 组件

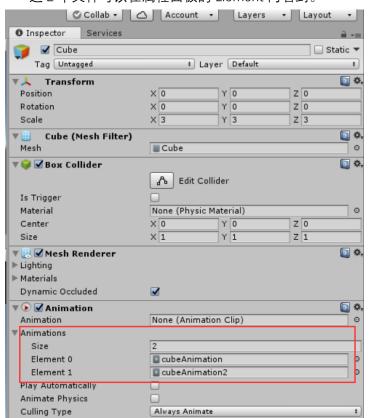

- 3、执行"Windows-Animation",打开 Animation 动画面板。
- 4、选中 Cube, 在 Animation 面板中, 点击"Create New Clip"按钮, 为 Cube 创建 2 个动画, 分别命名为"cubeAnimation"、"cubeAnimation2"。

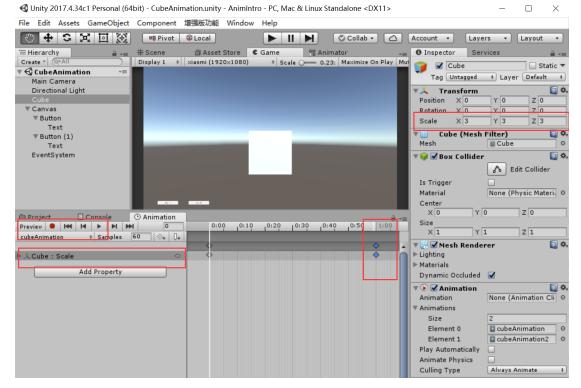

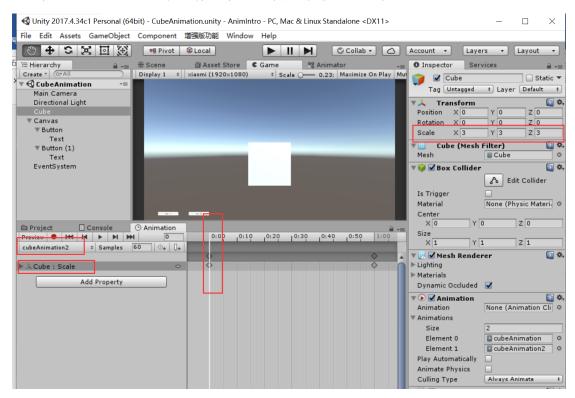

这 2 个文件可以在属性面板的 Element 内看到。

5、针对 cube Animation,制作 1 个简单的动画: 使 Cube 的 scale 从 1 到 3。

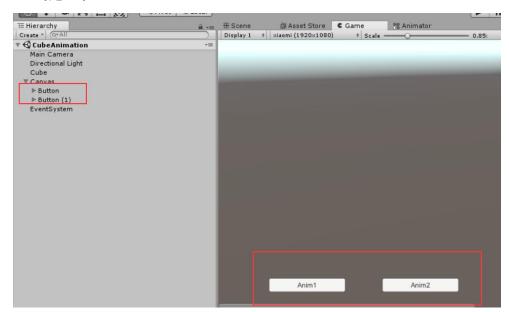

6、针对 Cube Animation 2, 制作 1 个相反的动画, 使 Cube 的 Scale 从 3 到 1.

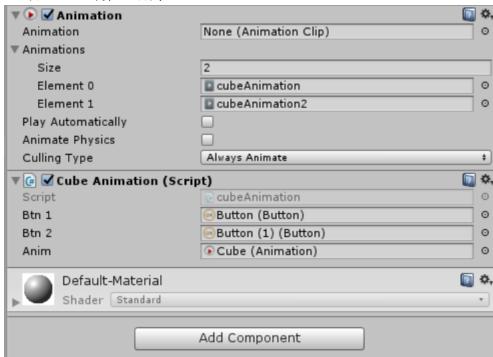

7、创建1个脚本 cubeAnimation.CS 脚本绑定至 Cube.

```
□using System. Collections;
 2
        using System. Collections. Generic;
 3
        using UnityEngine;
 4
       using UnityEngine.UI;
 5
 6
      Epublic class cubeAnimation : MonoBehaviour {
 7
8
            public Button btn1;
9
            public Button btn2;
10
            public Animation anim;
11
12
            // Use this for initialization
13
            void Start () {
14
15
                btn1. onClick. AddListener (animHandler1);
16
                btn2. onClick. AddListener (animHandler2);
17
                anim = this.GetComponent<Animation>();
18
19
20
            void animHandler1() {
                anim. Play("cubeAnimation");
21
                Debug. Log("anim1");
22
23
24
25
            void animHandler2() {
                anim. Play("cubeAnimation2");
26
                Debug. Log("anim2");
27
28
29
30
```

8、创建 2 个 Button UI。

9、设置 Cube 属性。调试

10、注意: 动画文件的默认播放属性, 应当检查一下是循环一次还是无限次。
